Dear Valued Customer,

Numerous states have passed hazardous packaging regulations that will impact both the screen printing and supply industries. This legislation, modeled after the Council of State Governments (CSG) toxics reduction legislation, sets limits on the amount of lead, mercury, cadmium and hexavalent chromium that can be found in any package or packaging components. Packaging components have been defined as any individual assembled part of a package, including inks and labels. The CSG has taken over this legislation originated by CONEG (Coalition of Northeastern Governors). Visit their website (www.csg.org) for more information.

Essentially, the law states that no product shall be offered for sale or for promotional purposes in a package that contains levels of the aforementioned heavy metals in excess of 100 parts per million (0.01%), effective January 1, 1994.

Based on information from our suppliers and formulation analysis, the below ink lines are manufactured in compliance with current CSG regulations regarding content of lead, mercury, cadmium and hexavalent chromium.

**Nazdar discontinued manufacturing colors containing heavy metals in January, 2007, however there may still be colors available in distribution and/or at customer locations.*

Compliance for the above mentioned product(s) is based on raw material supplier information and the Nazdar formula. This information can be used for compliance with the regulation listed above without any formal guarantee as the product(s) are not analyzed on a regular basis. However, based on our experience and knowledge, the purity requirements are fulfilled. Nazdar strongly recommends that each customer and/or end-user independently determine the suitability of Nazdar product(s) under actual conditions of processing and end-use.
