To Whom It May Concern:

Subject: Consumer Product Safety Council Regulations
Lead, Phthalate and PVC Content

No Kiwo products sold in the United States contain lead, phthalate esters or PVC (polyvinyl chloride) in concentrations above the minimum concentrations mentioned in the above mentioned regulations.

We do not add any of these compounds to our products, nor have our suppliers used these compounds in our raw materials, according to supplier information. We do not use any processing equipment or supplies which would add these materials to our products.

We have not tested our products for the presence of these compounds. We consider it highly unlikely, if not impossible, that any lead, phthalates or PVC could be transferred to printed substrates from our products in the screen printing process, even if the products were found to contain (to us unknown) traces of lead, phthalate esters or PVC.

Sincerely,

A handwritten signature in black ink that reads 'Clark King'.

Clark King
Sr. VP, Kiwo, Inc.
