

**Nortech** scoop coaters feature a dual-sided coating edge for a sharp edge thin coat for higher screen mesh or a rounded dull edge for coating lower mesh screens or heat transfers. Extruded from T5 aluminum, this coater is comfortable to handle, sits easily on flat surfaces between coats, and holds an ample amount of emulsion for lengthy coating sessions.

The dual edge scoop coater comes complete with snap-on injection molded end caps as well as a full top snap-on dust cover.
