HIGH SPEED DIRECT-TO-GARMENT PRINTING

The KYO direct-to-garment printing system by Aeoon Technologies provides new design possibilities with high-speed, high resolution printing. The Aeoon Kyo Compact Series is the newest addition to this line of digital direct-to-garment textile printers. The Aeoon Compact Series is smaller and elegant, yet equally as durable as the original KYO. Therefore, it is perfect for businesses with limited space availability. The Aeoon Kyo Compact Series can reach printing speeds of up to 400 T-Shirts per hour (A4 print size, depending on image and resolution). Get outstanding print quality while being able to match the production rate your customers demand with the Aeoon Compact.

SCALABLE MACHINE PLATFORM

The machine is available with four or eight printheads. The Compact Kyo4 version with 4 printheads can print CMYK on light-color and white garments. The Compact Kyo8 can either print with twice the CMYK heads on light-color and white garments or in CMYk and white on light and dark-colored fabric.

INDUSTRIAL PRODUCTION VOLUME

The KYO was designed and optimized for high volume industrial mass production. Aeoon uses the highest quality components in the construction of the KYO series printers for consistent reliability and endurance.

ORDER MANAGEMENT

The KYO has been built to be integrated in a fully automated production environment. It offers a complete package of automated RIP image processing and fully automated order management. It can also be integrated into existing enterprise resource planning systems.

PRINTER FEATURES

- Slim, elegant design
- Up to 400 t-shirts/hr
- Maximum printing size: 40 x 50cm
- Temperature controlled ink compartment
- Nano-coated machine body for easy cleaning (optional)
- Size: 2.8m x 2.2m x 1.7m
- Weight: 1,500kg
