

Livingston Systems Epson® SureColor® F2000 Series TucLoc® Platen System

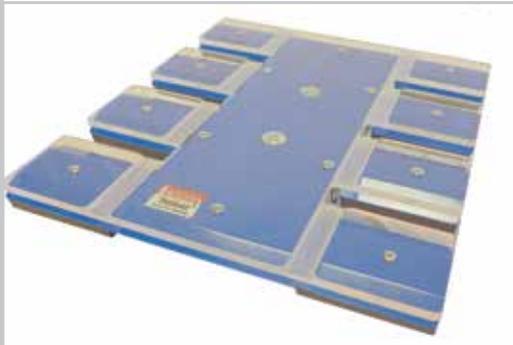

Livingston Systems is proud to offer a full range of platen solutions for the Epson® SureColor® F2000 series direct to garment printer. We have been a developer and manufacturer of innovative and easy-to-use screen printing and direct to garment printing equipment since 1989. The vision for our company is, and has always been, to develop the highest quality garment-holding platens systems for the garment decorating industry. Specializing in unique hold down equipment for printing on shirts, hoodies, hats, and other substrates, we strive to match precision manufacturing with unparalleled service and support. We provide products that allow our customers to print smarter.

The SC-F2000 series Small, Medium, and Large platens have been developed with assistance from Epson America, Inc. The SC-F2000 series TucLoc® platen is interchangeable with the OEM platen using the same style locating pins. Printable area and height are identical to the original platen. Optional risers are available on the platens for pockets and hoodies. These platens also have adjustment knobs to open and close the garment tucking area, accommodating materials of varying thicknesses.

The dual sleeve TucLoc® platen becomes extremely versatile when paired with our optional 4x4.5" pocket riser. This combination allows you to easily print short sleeves, neck tags, and onesies.

The 8-up 4"x4" TucLoc® platen is great for custom neck labeling and short sleeves. The lower TucLoc® section is also removable for printing on can coolers (koozies).

The classic Hat Champ is great for printing on low structure caps. The Epson® Hat Champ® comes with a large and medium sized platen.

All our Epson® platens are sold through authorized resellers only. Visit our website for a list of current dealers.
