# Winged Flood Bars

Available for  
Most Automatic Machines

Winged Flood Bars  
are stocked in 6 different  
sizes - 4", 12", 14", 16", 18", 22"  
Any other size is available - 6pc min

Every time that your screen  
is flooded, the wings are  
working to control the ink.

Mix Less Custom Ink, use less ink, less  
cleanup time - and many other  
advantages make this a no-brainer for  
every shop that has an automatic  
screen printing machine.

Regular flood bars leave a trail of ink on the left and right side of the screen. This requires that you have to routinely scrape the ink back to the inkwell by hand. You either stop the machine and loose production time, or you have another person do it and will be risking injury by performing this task on cycle.

Either way - it's a money killer. Winged Flood Bars are a tiny investment that eliminates this issue completely. Find out why these have been so popular for 20 years.

**Many Thousands have been shipped the world over.  
Find Out why We offer a 100% satisfaction guarentee.**
