

IMS615 Super Haze Remover

Description

ImageStar Haze Remover Paste products are designed to be the strongest haze removers in the *ImageStar* line. Paste haze removers cling to the mesh better than any other product and allow the haze remover to remain on the ink haze longer. These products are caustic; they require gloves and eye protection for safety during use.

Processing Recommendations:

ImageStar Haze Remover Pastes should always be stirred prior to use.

- Apply with a brush, and scrub into both sides of the mesh.
- Allow dwell time of 10 minutes and remove with a high pressure spray. These products must be removed from the screen within 15 minutes to avoid mesh damage.
- Spray from the bottom of the screen to the top to allow remaining material to continue to work without being diluted.

Product Highlights:

This product is lighter in viscosity and is the most aggressive paste.

Packaging:

- 1 Gallon
- 5 Gallon

Nazdar stands behind the quality of this product. While technical information and advice on the use of this product is provided in good faith, the User bears sole responsibility for selecting the appropriate product for their end-use requirements. This product has not been tested for application by any other method than described. Any liability associated with the use of this product is limited to the value of the product purchased from Nazdar. Nazdar recommends checking with your local wastewater district prior to washing any chemicals or ink products into the drain.
