JALEMA
FILING SYSTEMS DIVISION

GRAFI-SYSTEM
THE FILING SOLUTION THAT SAVES TIME, SPACE AND MONEY
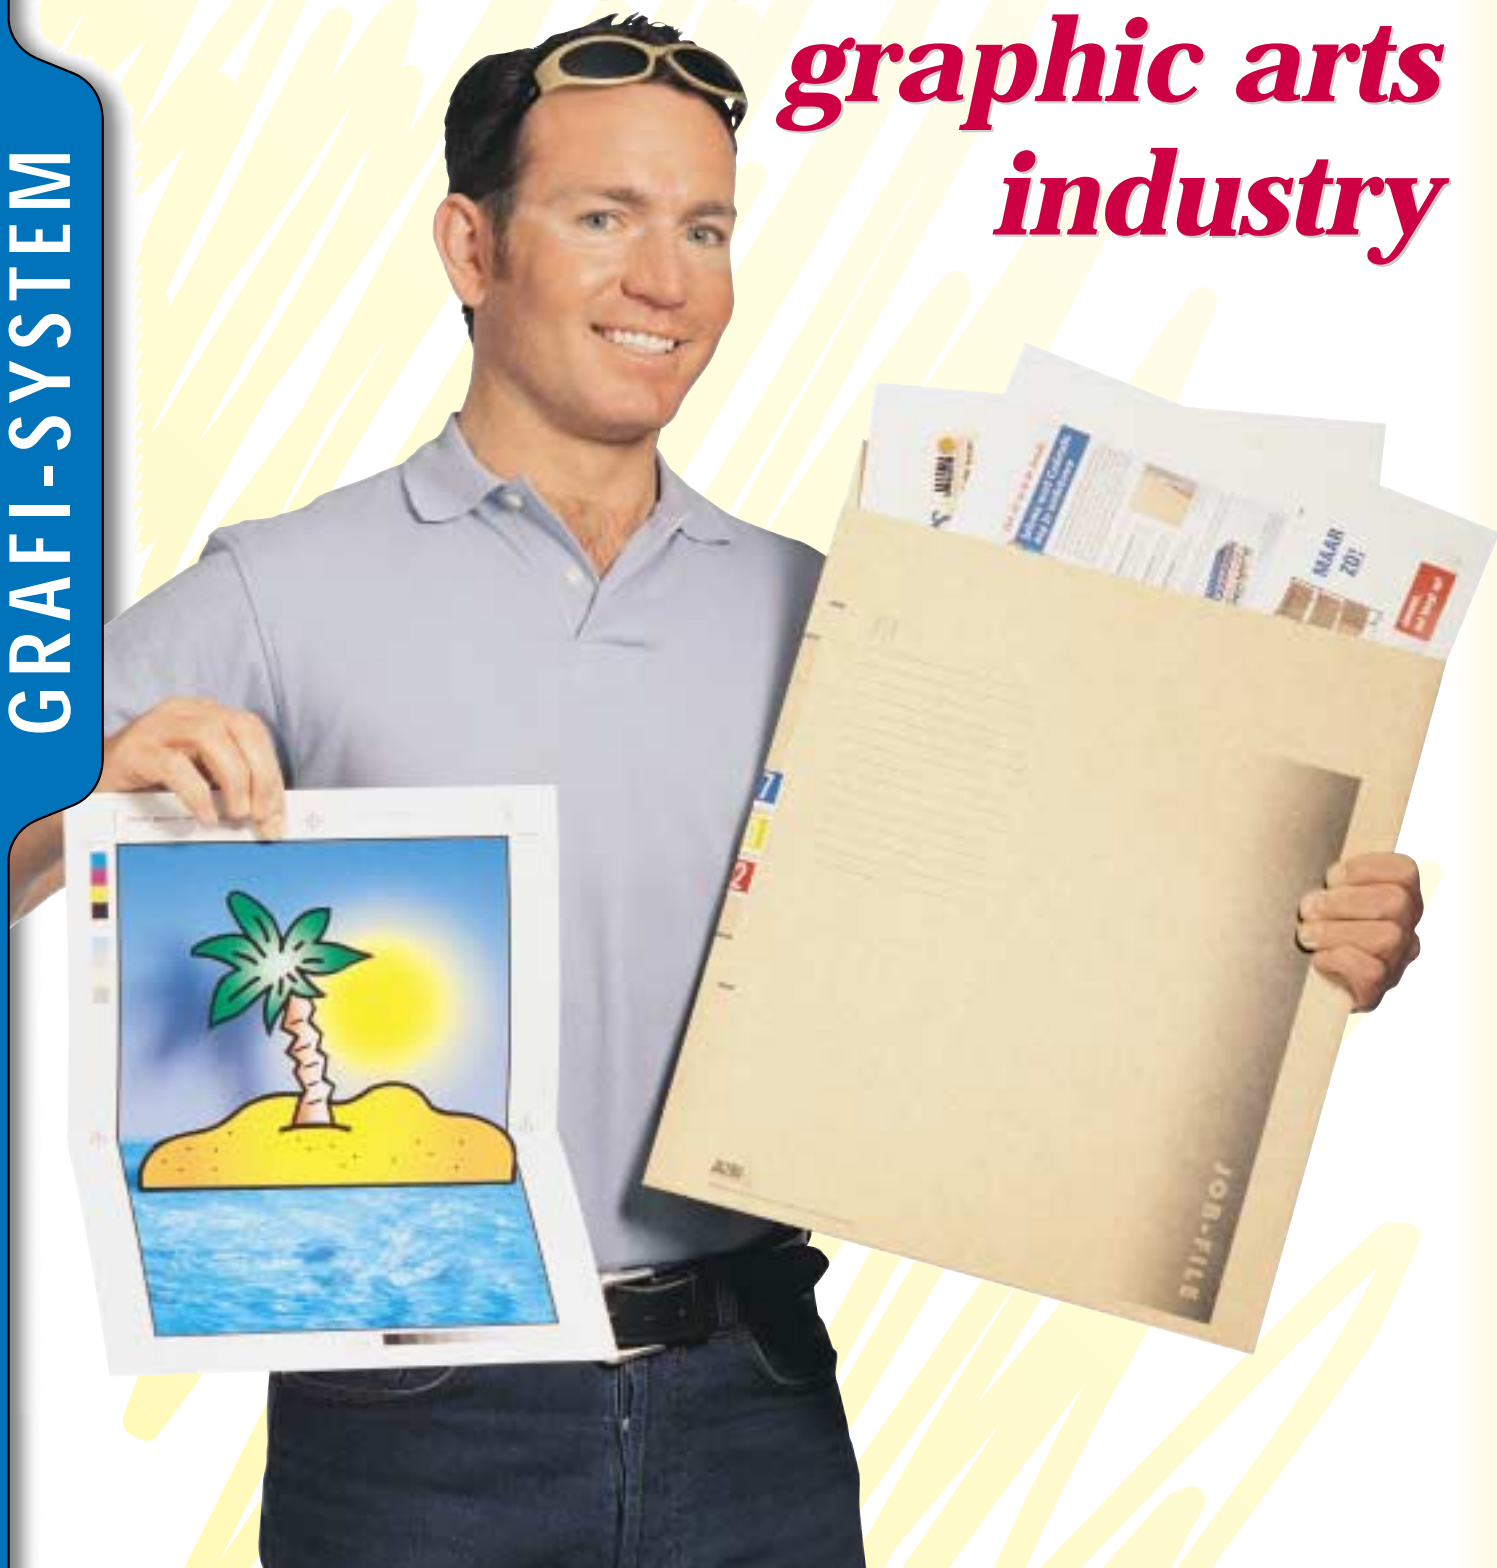

Film, hard copy proofs, drawings, samples, job tickets, plates (offset and flexo), CDs and all types of digital storage media are valuable materials which require protection. In the dynamics of the graphic arts industry, such materials need to be stored and retrieved quickly and safely. The Grafi-System from Jalema was developed for this very purpose. It is an integrated filing system specifically geared to the demands and desires of the graphic arts industry. The Grafi-System is the perfect filing solution for the entire graphic arts process, from concept through production to printing. With the Grafi-System, indexing, locating, removing and replacing materials can be accomplished in a matter of seconds. Further, because the files are suspended laterally on a profile-bar, the Grafi-System saves valuable floor space.

Grafi-System efficient and cost effective filing

THE GRAFI-SYSTEM IS ONE STEP AHEAD OF TODAY'S DEMANDS.

Anticipating the dynamic developments within the graphic arts industry and changes in the production process that accompany such developments, Jalema has adapted the entire Grafi-System program to be even more versatile and flexible.

THE NEW HEART OF THE IMPROVED GRAFI-SYSTEM

The heart of the Grafi-System - the total filing solution for the graphic arts industry - consists of extremely durable and multifunctional files in a wide range of formats and designs. Because these files are filed laterally, that is diagonally, on a profile, they save up to 40% of the space taken up by traditional storage systems. Compared to filing cabinets, for example, you can store 3 to 4 times more files with the Grafi-System in the same amount of floor space.

What's more, it is easier and faster to find the file you need when you need it.
Space-saving lateral filing is possible thanks to Jalema's unique single point of suspension. The files are held on the profile-bar with a solid stainless steel hook which allows the file to be removed with a simple one-handed movement (a pendulum-like motion). Another advantage of lateral filing is the use of Jalema's sophisticated and time-saving color coding system (Codetabs or Code in One).

THE NEW JOB-FILES

The Job-files have two separate pockets, one of which is covered by a protective dust flap. In this way, materials for a complete job can be stored in a single file, yet in separate pockets. The Job-files are available in nine different formats. The outside is constructed of smooth brown, 230-gram Whitekraft cardboard, while the inside is lined with a super smooth, white, non-transparent layer, which keeps delicate materials from becoming damaged and allows you to slide them in and out with ease. The two largest sizes (5262200 and 5280000) are constructed of an even sturdier 300-gram Whitekraft cardboard.

THE NEW REPRO-FILES

Constructed of 335-gram grey colorkraft pressboard, these are the most durable files in the Grafi-System program. Designed specifically for more rigorous filing demands, Repro-files combine all the benefits of the Grafi-System with an unprecedented level of protection for your materials.

FILING WITH ONE HAND

Grafi-System files are equipped with Jalema's unique one-point suspension system. All files hang laterally on steel profile-bars with a new and improved stainless steel suspension point, so that the files can be hung or removed with ease and assurance in a simple hand motion. In this way, you increase productivity through accessibility and decrease the space needed for the files.

A smooth workflow with Grafi-System

With the Grafi-System you always have all the necessary materials in a file at every production stage - from the quotation, design and pre-press stages to printing, invoicing and filing. The Grafi-System guarantees a seamless workflow that is sure to save you time and money.

During the design phase, Grafi-System files can be used to safely store concept sketches, photographs and quotations. Your file can be easily passed on to your pre-press co-workers.

After the pre-press phase, the Grafi-System file is passed to production, which then has all the pertinent information together in a single file. From the design stage to printing, from the film to the proof - there will no longer be any misunderstandings or loss of time, but a clear understanding of the total job as it moves through your system complete, in a single file.

After being printed and invoiced, the Grafi-System file makes its way to the central archive. The efficiency of lateral one-point suspension is maximized at this stage, because the more files there are, the more savings that are archieved due to higher efficiency and the better use of space.

Files can be transported easily and efficiently with one of Jalema's new ergonomic Transport Trolleys. The Transport Trolleys are available in wide and narrow models.
The Grafi Trolley is designed to transport the largest files safely and carefully. Efficient, easy-to-assemble Grafi-System racks are available in a variety of formats and designs which can be used at any stage of the production process and at any location for the temporary and orderly storage of files containing work in progress. You'll now be able to profit from the convenience, cohesiveness, and savings of both time and space with the Grafi-System at every phase of the process. These racks will help you make optimal use of the available space in the central archive - the temporary production station for orders and files - in every respect. The unique color coding system makes filing simple and guarantees a considerable savings of time when retrieving orders and information.

Photographers, designers, illustrators, DTP studios and web designers - every professional in the graphics pre-press process places the same heavy demands on workflow and storage. The Jalema system meets the demands of these specialists. The MediaFiles enable you to store CD-ROMs and other digital storage media safely and efficiently. So whether you take photographs, work with DTP or CD-ROMs, the Grafi-System files and MediaFiles are the total and customized solution to all your workflow and filing requirements.

MEDIAFILES

Efficient and convenient filing of digital storage media like CD-ROMs, DVDs, Zip and Jaz discs has literally been given new dimensions with the MediaFiles from Jalema. MediaFiles are compact, sturdy storage files equipped with Jalema's unique suspension point and suitable for color coding. Naturally there are also special MediaFile racks, hanging profile-bars and a specially designed Transport Trolley available. MediaFiles come in four different designs: "Insert" (in durable blue Colorkraft cardboard for storing one to two CDs without their cases); "Basic" (with a single insert for one CD/DVD) "Collective" (a larger sized, gusseted file for storing up to two CDs or Zip discs with their cases); and "Case" (made of hard PVC with a transparent pocket that holds one CD with it's case or 4 CDs with our "Inner Holder"). Complete information on this new product line in the Grafi-System can be found on page 8 of this catalog.

Grafi-System: *order and organization in the pre-press phase*

REPRO-FILES

The Repro-files are the sturdiest of the Grafi-System assortment. Designed specifically for more rigorous filing demands, Repro-files combine all the benefits of the Grafi-System with an unprecedented level of protection for your materials. The Repro-files are constructed of durable 335-gram grey Colorkraft pressboard. Repro-files come with two pockets, one of which is covered by a dust flap.

COLOR CODING

Filing means not only storing files, but also finding them when you need them.
A good coding system enables you to file optimally, that is, with a minimum of time and effort. Jalema has integrated such a coding system in the Grafi-System. The system is based on color coding the files using self-adhesive colored tabs with numbers, letters, years or just colors. Every Codetab has its own color, so a "misfile" is immediately noticeable and therefore preventable.
There are two color-coding system options available. Our "Code in One" allows you to select a pre-set range of numbers for your files: or our "Codetabs", which allow you to code the files yourself in accordance with your own system. To read more on the color coding system and products, see page 7 of this catalog.

Job-files

Dust, creases, folds and scratches are disastrous to all visual materials. The Job-file series was specially developed to prevent such damage. These files feature both a normal pocket and a second pocket with a dust flap. In this way, you can keep your films dust-free and separate from other working materials while filing them as a single project in a single file. The formats are tailored to the most common printing press formats. The Job-files are constructed of 230-gram brown Whitekraft cardboard and have a smooth white inner surface. The two largest files 5262200 and 5280000 are available in 300-gram brown Whitekraft cardboard. The files are equipped with a stainless steel suspension point and a clear imprint. The largest format Job-file (item #5280000) comes with a single pocket protected by a dust flap.

Prod.nr.	Description	Capacity	Pkg.
5225200	Job-file-2 pockets	10" x 16"	50
5237200	Job-file-2 pockets	15" x 18"	50

5270648	Job-file-single pocket	25" x 37"	50

Repro-files

Repro-files are a sturdier, stronger version of the Job-files. They are constructed of heavier cardboard (335-gram pressboard). Like the Job-files, the Repro-files incorporate a two-pocket design, with a dust flap protecting one pocket. Designed specifically for more rigorous filing demands, Repro-files combine all the benefits of the Grafi-System with an unprecedented level of protection for your materials.

Prod.nr.	Description	Capacity	Pkg.

Design-files

Specially suited for collective filing, the Design-file features two linen gussets and a capacity of more than one inch. The Design-file is constructed of 280-gram blue colorkraft cardboard and has two metal suspension hooks.

Prod.nr.	Description	Capacity	Pkg.
5204500	Design-file: 2 gussets	18 $^3/_4$" x 22 $^3/_8$"	50

Coding

Filing means not only storing materials, but also being able to find them again, (and, most importantly,) with a minimum of time and effort. A good coding system enables you to file optimally. Jalema has developed such a system with our color Codetabs. Codetabs are laminated, self-adhesive colored tabs that are available either in solid colors or with numbers, letters, or years. All files (with the exception of the largest formats) come with a coding strip consisting of six sections of 1 inch each and one of $^3/_4$ inch. The Codetabs are adhered to these sections, thus creating an efficient coding system. You can code your files using a variety of methods, such as consecutive numbering, alphabetically or based on order or job numbers. If a color-coded file has been hung in the wrong place, it stands out immediately because the colors on the Codetabs do not match. This efficient color coding filing system saves you 40% of the valuable time you would normally spend looking for files.

See below for the exact product and color numbers of the different Codetabs.

Jalema Jockey

The Jalema Jockey is an universal index flag which fits on any file, in the holes you can make with a hole punch. Most Jalema files are already punched for the Jockey. You can print the text on the supplied typing strips. If you wish to work with color coding, you can use the self adhesive Jockey labels. These labels are available in numbers (0-9) and letters (A-Z) that can be applied quickly and easily on the typing strips of the Jockey.

Prod.nr.	Description		Pkg.
6100520	Jalema Jockey index flags with typing strips	(for prepunched Jalema files)	50
6205000	Jalema Jockey color labels 0-9	(21 ea 0-7, 20 ea 8-9)	5 sheets/bag
6205200	Jalema Jockey color labels A-Z	(208 assorted labels)	5 sheets/bag
6200518	Typing strips for Jalema Jockey		50 sheets/bag
6100720	Jalema Jockey for 2$^3/_4$" US standard		50 sheets/bag

Self-adhesive Pockets

The clear pocket may be attached to the files for displaying samples, proofs, artwork or job tickets. A guide is printed on the files for this purpose. The pocket is self-adhesive and allows visual identification of the product inside the file.

Prod.nr.	Description	Size	Pkg.
6101800	Self-adhesive pocket vinyl	9" x 12$^1/_2$"	50

Digital storage media

Data filing has literally been given a new dimension with the increasing availability of digital storage media (such as CD-ROMs, DVDs and Zip discs). All conceivable types of data files of nearly unlimited size are stored on compact discs and, in this way, made accessible for reference or reuse - that is, if those discs are filed efficiently and in an orderly fashion. Jalema's MediaFiles enable you to do both.
The MediaFiles are available in four functional designs:

MediaFile Basic

A top loading file with a single insert for one CD/DVD, including a dust flap for protection. It has a thumb slit for removing the media easily.

MediaFile Insert

is constructed of sturdy blue 189 lbs. colorkraft cardboard and can be opened like a book. On the right of this MediaFile is a plastic pocket with a soft lining, into which a total of 2 CDs can be inserted. On the left is a compartment for the accompanying booklet or other documentation. This file allows for true high density storage for the users who do not want to save the CD case.

MediaFile Collective

is also constructed of blue Colorkraft cardboard and holds 2 CD-ROMs or Zip discs and their cases. This MediaFile stays in the cabinet or rack and the CDs are simply inserted or removed.

MediaFile Case

is constructed of hard PVC and has a transparent pocket that holds a CD or Zip disc including the case. There is a thumb slide for removing the CD easily and a lined section on the back for recording information of the contents.

4-CD Inner holder

If more than one CD is needed for a project, you can store the CDs together in the CD-4 case that - the name says it all - holds 4 CDs, even though the case is no thicker than a normal CD case. Used in conjunction with our 'Collective' MediaFile, you can store up to 8 CDs or Zip discs in a single file.

Combining function and convenience, our handy and attractive desk rack keeps your disks at your fingertips. The desk rack holds 25 PVC 'Case' MediaFiles or 50 cardboard 'Insert' or 'Collective' MediaFiles.

Media-Desk rack

Combining function and convenience, our handy and attractive stackable desk rack keeps your disks at your fingertips. The desk rack holds 25 PVC Case files, 25 cardboard Collective files, 100 Insert files or 150 Basic files.

Media Wall filing-rack

Jalema has developed a sturdy metal wall rack for storing MediaFiles. This blue rack is 44" high and contains 6 profile-bars measuring 37 $^1/_2$". Every wall rack can be expanded to the right or left by means of an additional support and an extra set of 6 profile-bars. Two wall racks can also be mounted on top of one another using a special connecting set, consisting of 2 diagonal supports. Two of these racks can also be connected back to back to create a free-standing floor rack.

Prod.nr.	Description	Pkg.
3601502	MediaFile Basic	50
5651502	MediaFile Insert	100
5653002	MediaFile Collect	100

6497000	Media-Wall filing rack; basic	1
6496000	Set of 6 profiles	1
6497200	Media Wall filing-rack; extension	1
6497800	Connection set	1

Uni-racks

The Jalema Uni-racks and Duo-Profiles (T-bars) provide safe, flexible storage in various size combinations. Job-files, Repro-files (except for the largest size of both) and the Design-file can be suspended together in the same rack. Files of smaller size are suspended in the upper section and larger files in the lower section. Expansion is simple through the addition of extension units attached to either end. Uni-racks are supplied as complete kits with simple, easy to follow assembly instructions: one tool does the job. Jalema offers two types of Uni-racks: one rack of 15$^3/_4$" depth which is suited for files up to and including 18$^7/_8$"x22$^1/_2$" and one rack of 21$^5/_8$" depth for files up to and including 25$^1/_4$"x31$^1/_2$".

Prod.nr.	Description	Size W x D x H	Maximum load

6455504	four levels (four duo-profiles)		

Duo-Profiles (T-bars)

Duo-Profiles are the special bars on which the files are hung via the patented Jalema hook. The sets are supplied with complete assembly materials.

Prod.nr.	Description	Size
6460200	Set of 2 Duo-Profiles (T-bars)	37$^1/_8$"
6460300	Set of 3 Duo-Profiles (T-bars)	37$^1/_8$"
6460400	Set of 4 Duo-Profiles (T-bars)	37$^1/_8$"

Duo profiles are also sold by the meter (in multiples of meters only) but can be cut at any length.

9705300	Duo-profile up to 5 meters/196$^7/_8$" / 16' 4$^7/_8$" (1 meter = 39$^3/_8$")	
5801400	Uni-profile up to 5 meters/196$^7/_8$" / 16' 4$^7/_8$" (1 meter = 39$^3/_8$")	

Offset-Rack

For years, Jalema's Offset-Rack has been the archival unit of choice for storing large-format materials. The Offset-Rack includes one profile-bar for file storage with a maximum load of 550 lbs. Now, the design of the Offset-Rack has been optimized to allow for a two-level archive unit (9' ceiling is needed).
While the basic Offset-Rack still functions perfectly as a stand-alone unit, you can easily add the top unit which comes complete with a simple connector set. Together, the double Offset-Rack allows you to store **twice** the number of files in the same floor space ~ now that's efficient storage.

Prod.nr.	Description	Pkg.
6480500	Base; for files up to and including 34" x 43"; (31$^1/_2$"w x 33"d x 52"h)	1
6481000	Top; for files up to and including 34" x 43"; (31$^1/_2$"w x 33"d x 52"h)	1

Racks and built-in sets

Jalema can also provide custom-made built-in brackets for any existing cabinet, rack, safe, etc. This will allow you to store your valuable files within easy reach; in your own cabinet, safe, fire-resistant cabinet, storage rack, wheeled rack, etc

Prod.nr.	Description	
5802900	Side brackets for metal shelves	•
5802600	Side brackets for metal cabinets	••
5801900	Side brackets for wooden cabinets	•••
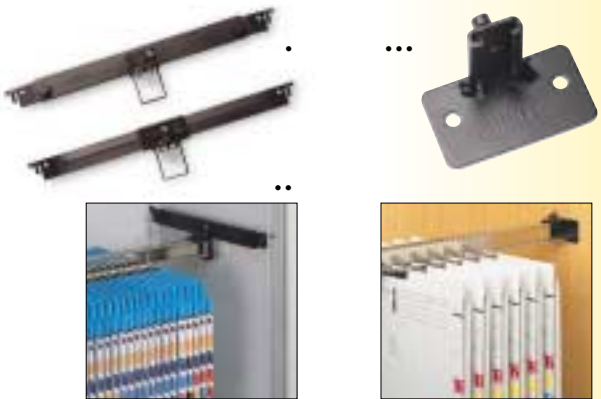

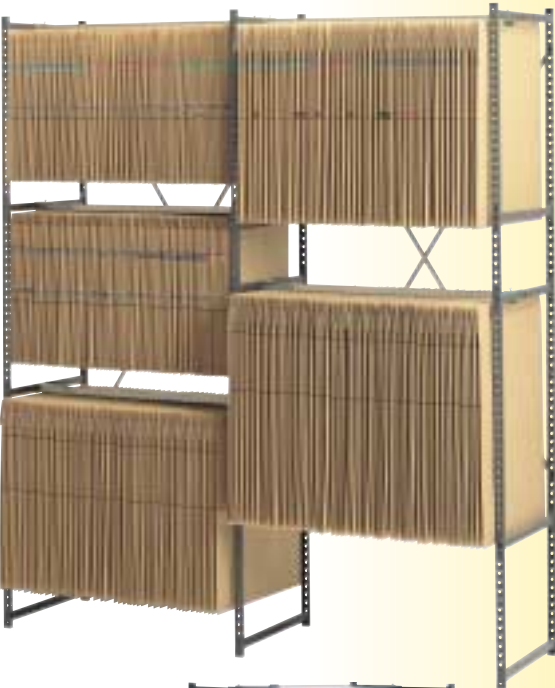

Wall-filing-racks

Ideal for smaller applications. These wall-racks can be placed near your work space to put a number of files at your immediate disposal.

Prod.nr.	Description	Sizes	Maximum load

Transport carts for the graphics industry

Jalema's line of mobile trolleys offer the versatility to keep critical materials effectively organized while making them accessible anywhere in the pressroom. The new trolleys combine modern, ergonomic design with exceptionally strong materials and construction. There are several special carts available for transporting the many different file formats. There are wide and narrow models, suitable for files up to 22" x 26" or for the MediaFiles (for storing CDs & digital media). The Grafi trolley was specially designed for all files up to 32" x 42". MetroCarts can be customized to fit allmost any requirement and offers a more economical solution.

Prod.nr.	Description	Sizes	Maximum load
• 64012**	Small Transport Cart for files		
	up to and including 22" x 26"	26" w x 17"d x 44"h	165 Lbs.

	(up to 2" expansion)		

Jaleco file

A file with two suspension points which is open at the front and the rear.

Prod.nr.	Description	Capacity	Pkg.
5027900	Open sides (up to 2" expansion)	10" x 13$^1/_2$" (folio)	100

Screen Print Files

The special format Jalema screen print files are constructed of 189# sturdy brown kraft liner cardboard. Three standard models are available, providing a wide solution to filing demands.

| Prod.nr.	Description	Capacity	Pkg.
5350075	Single pocket	17" x 14"	100
5350675	Double pocket	17" x 14"	80
5305000	Single 1$^1/_4$" gusset	18" x 14"	70

Expanso

Jalema Expanso lets you use your current filing space 75% more efficiently and without structural or architectural changes, or time-consuming moves. Jalema Expanso consists of a set of tracks and a carriage. The tracks are mounted on the floor in front of and parallel to your Uni-racks or Offset-racks. The tracks can also be joined for continuous lengths.

Please note: stacked Offset-racks cannot be placed on the Expanso system.

Jalema Expanso for Grafi-System filing comes as a do-it-yourself kit. Easy-to-follow assembly instructions are included in the packaging.
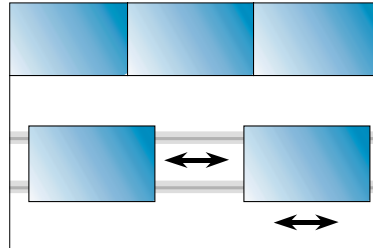

Prod.nr.	Description
6721000	set of 2 tracks for one carriage; 82 $^{11}/_{16}$"
6731250	set of 2 tracks for two carriages; 123"
6741500	set of 2 tracks for three carriages; 163 $^{3}/_{8}$
6704700	carriage for Uni-rack 15 $^{3}/_{4}$"
6706500	carriage for Uni-rack 21 $^{5}/_{8}$"
6708400	carriage for Offset-rack (base only)

Jalema: space and timesaving filing solutions for more than 50 years

Established as a family business in 1947, Jalema has grown into one of Europe's largest manufacturers of professional filing systems. The head office of this dynamic enterprise is located in Reuver, the Netherlands. Jalema also has subsidiaries in Belgium, France, the United States and England.

Jalema's time, space and money-saving filing solutions are based on files with a unique one-point suspension system, making lateral filing possible. In other words, the files hang diagonally on a profile-bar and therefore require an absolute minimum of space. A wide range of accessories makes it possible to work more quickly and efficiently than ever before.

Because of the quality of our innovative, integrated filing systems, Jalema has managed to secure a position as market leader in various countries and industries (including the graphic arts industry and healthcare sector).

Quality (Jalema is ISO-9001 certified), service and continuity form the cornerstones of the long-standing relationships Jalema maintains with its customers across the world.
